#### **Mac Mini Vault announces Phoenix data center and Milwaukee expansion.**

Franklin, WI February 10, 2014 – Mac Mini Vault announced today data center expansions that include adding a location in Phoenix, AZ and increasing data center space in their Milwaukee data center.

Mac Mini Vault becomes the first Mac colocation provider to open a second location. Mac Mini Vault will be bringing their Phoenix data center (PHX1) online March 2014. PHX1 is a state of the art data center with fully redundant power, cooling, and bandwidth. The facility is pre-wired with fiber from over 20 bandwidth providers. PHX1 is a secure location that features multi-factor authentication, a 24x7x365 trained security staff, extensive camera surveillance, and is SOC 2 audited. This facility is over 1,400 miles from Mac Mini Vault's Milwaukee data center, which offers a great option for disaster recovery, redundancy, and strong West Coast network connectivity.

Mac Mini Vault customers will have the option of deploying Mac minis at either location. Service features and pricing will be identical between locations.

“Offering Mac mini colocation from a second location is a huge accomplishment,” said CyberLynk President Adam Hobach. “It is a larger accomplishment to fully support customers at both locations with highly skilled Mac engineers.”

Mac Mini Vault has been operating out of CyberLynk Network's Milwaukee data center (MKE1) since 2010. CyberLynk Network has recently begun an expansion of the MKE1 data center that will increase capacity to over 100 cabinets. The expansion will be completed and online later this summer.

-----

Mac Mini Vault is operated by CyberLynk and is the leader in data center services tailored to hosting Mac servers. Their innovative cabinet designs include high density configurations for Mac minis and Mac Pro systems. This allows Mac Mini Vault to offer data center services at competitive prices. All services are backed by a trained and dedicated staff of high-level engineers that are experts with OS X, Linux, Windows, VMware ESXi, and networking/hosting technologies.
